

# How to create an “Analogue” CCTV system very simply...

- Plug your cameras into Tecton Liberators
- Run Cat 5 cable to control locations, gate houses, and managers office etc. (Dont mention the word 'Network', otherwise the IT department will stick their oar in)
- Place keyboard on desk and view any camera, from anywhere, on the monitor. (As well as playing back, and copying evidence to DVD)
- Just add more monitors to see more cameras, all controlled from the keyboard.
- Repeat steps 2 and 3 for other control locations.
- Go home early!

**Get the benefits of an IP system without the headaches, license fees, poor quality, network conflicts, and incompatibility, etc. No PC required, virus free.**

**Tecton**
